

PT. RIDAR ESINDO

**Conveying System, Tanks, Stainless Steel Product
Manufacture & Engineering Design**

PRODUCTS CATALOGUE

Company Profile

*"We serve and ensure to our clients
with the best quality product"*

Company Profile

PT. Ridar Esindo (NPWP 02.065.877.9.036.000) have great pleasure in introducing ourselves as a company engaged in manufacturing different types of steel machineries related to all types of engineering field today. Established in 1999, we have experienced steady growth over the last 10+ years, and have accumulated a wealth of experience in this field thanks to our experienced skilled workers headed by our foreign trained engineers.

With an area of +8000 M² - 4 (four) buildings for production including man power of more than 100 people, we design, manufacture different types of tailor made machineries per our design and also according to our customer's drawings, specifications & requirements. Our technical teams are trained in fabrication, erection, testing and on site services ready to solve any problems and answer any questions.

Towards customer's satisfaction, our dedicated personal will commit to their task for supporting our customers to get the optimum value from our products and service. With the satisfaction of our customers, we maintain our growth and honor the esteemed loyalty of our people.

Vision

We are ever continuing our innovations, upgrading our skills and coordination.

Slogan

We Serve With Full Commitment & Support

Mision

We strive to be a competent partner for our customers, satisfying their requirements, solving their problems and providing the best service.

Machinery List:

- ◆ Lathe Machine, Milling Machine, Heat Resistant Welding
- ◆ Welding Machine (GTAW, TIG, SMAG)
- ◆ CNC Bending Machine, Shearing Machine, Lathe Machine
- ◆ Pressing Machine, Notching Machine, Punching Machine, ETC.

The Best Solutions

We are the global specialist in energy management

Customer are looking for integrated solution that will make their lives easier and optimized costs. Quiet simply our innovation strategy goal is to be more creative, more receptive and more responsive we can offer real technological breakthroughs to our markets

PT Ridar Esindo, one of the professional & innovative company in Manufacturing & Engineering Design has been a good partner of Schneider Electric. We supported PT Ridar Esindo by establishing automation process as well as offering reliable products to obtain a reliable machineries and industrial process.

Follow the success of PT Ridar Esindo by quickly getting the Improvement & Modernisation Solution and Process Engineering Consulting from schneider Electric

Schneider
Electric

An electric chain hoist enables us to do heavy duty lifting and help us with the moving of heavy machineries or equipments.

Certified welders are at our hands to produce the best quality products.

Our quality experience finishing department applies the final touch on our products.

Shearing Machines (Up to 12mm) & Bending Machines (CNC)

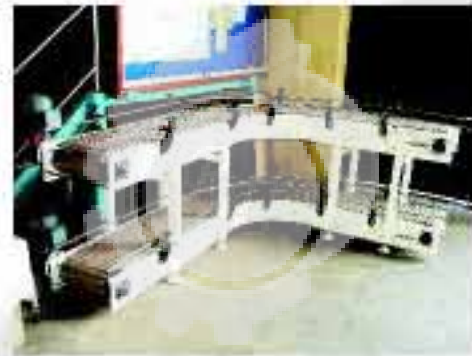

Our professional engineers and staff are at your service for our customers with any problems they encounter or questions that needs to be answered.

Pasteurization Line System

Cooking & Steaming Conveyor System

Turn Table With Nylon Screw

Dough Accumulator Conveyor System (Biscuits Production)

Shrimp Washing & Sorting Conveyor System

Stainless Steel Table Top Chain Spiral Conveyor System (Bread Production)

Table Top Chain Conveyor Line System With Turn Table

Spiral Conveyor Line System

Advantages of Spiral Conveyors:

Being one of the most modern and innovative designs, Spiral Conveyors allow you to take room in height and not in length. This method of conveying system is suitable both for packaged and unpackaged products.

Spiral Conveyor is an unique method to dry, leaven, cool, freeze, accumulate different products. The spiral conveyor gives considerable advantages such as energy saving, space optimization, easy access for cleaning and hygiene maintenance, different shapes and sizes and speeds to match throughputs.

Spiral conveyor systems can be of stainless steel or mild steel structure and are modular in design, come equipped with electronic speed control. These enable any amount of product to be carried to any distance, around bends, up ascent and down descent or in spiral paths. The input and the output to the Spiral Conveyor can also be at varying angles and degrees.

Improved processing efficiency, minimal floor space, low energy costs, stringent hygiene standards, wide range of operating temperatures, increased product carrying capacity all make the Spiral Conveyor a versatile and effective way of conveying.
